

Website development using Django Python framework

SHK position - website development

We have created a clean and intuitive design concept to revamp Vodafone chair website. The job is to implement it using Django and host the website using webCMS (the content management system provided by TU Dresden). Django is a high-level Python web framework that enables fast web development.

The job includes following tasks:

- Realizing the concept using Django.
- Implementing user authentication, access permissions, content administration, forms.
- Designing simple templates to present content (WebCMS takes care of the beautification).
- Content migration from current website to the new website.

Number of jobs: 1

Begin at: 1/11/2017

Time period: 4 months (until 28/02/2018); 10 hrs per week (flexible)
